NJZ-2000 Applications

JRC 建议: 使用 NJZ-2000来降低测试仪的成本

NJZ-2000 有很高的 RF 性能

You can use NJZ-2000 in place of existing high end testers at Production and Repair.

Actual Evaluation Data at Temperature around 25 degC, Humidity around 60%

中国总代: 香港中仪集团有限公司 4/14

Japan Radio Co., Ltd.

NJZ-2000 Supports 3GPP Conformance Tests

The NJZ-2000 covers all RF performance tests of 3GPP TS 51.010 (GSM/GPRS/EGPRS) typically required at Production and Repair.

Pragraph	Subject	NJZ-2000 Support
13	Transmitter	-
13.1	Frequency error and phase error	OK
13.2	Frequency error under multipath and interference condition	None
13.3	Transmitter output power and burst timing	OK
13.4	Output RF spectrum	OK
13.9	Output RF spectrum for MS supporting the R-GSM band	OK
13.16	GPRS transmitter tests	-
13.16.1	Frequency error and phase error in GPRS multislot configuration	OK
13.16.2	Transmitter output power in GPRS multislot configuration	OK
13.16.3	Output RF spectrum in GPRS multislot configuration	OK
13.17	EGPRS transmitter tests	-
13.17.1	Frequency error and Modulation accuracy in EGPRS Configuration	OK
13.17.2	Frequency error under multipath and interference conditions	None
13.17.3	EGPRS Transmitter output power	None
13.17.4	Output RF spectrum in EGPRS configuration	OK
14	Receiver	-
14.1	Bad frame indication	-
14.2	Reference Sensitivity	OK
14.3	Usable receiver input level range	None
14.4	Co-channel rejection	None
14.5	Adjacent channel rejection	None
14.6	Intermodulation rejection	None
14.7	Blocking and spurious response	None
14.8	AM suppression	None
14.9	Paging performance at high input levels	None
14.16	GPRS receiver tests	-
14.16.1	Minimum Input level for reference performance	OK
14.16.2	Co-channel rejection	None
14.16.3	Acknowledged mode/Downlink TBF/I_LEVEL measurement report	None
14.18	EGPRS receiver tests	-
14.18.1	Minimum Input level for reference performance	OK
14.18.2	Co-channel rejection	None
14.18.3	Adjacent channel rejection	None
14.18.4	Intermodulation rejection	None
14.18.5	Blocking and spurious response	None
14.18.6	EGPRS Usable receiver input level range	None
14.18.7	Incremental Redundancy Performance	None

NJZ-2000 Supports 3GPP Conformance Tests

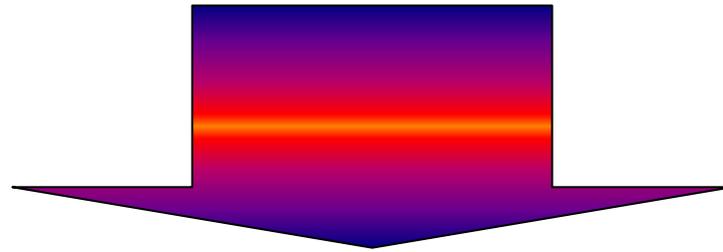

The NJZ-2000 covers all RF performance tests of 3GPP TS 34.121 (W-CDMA) typically required at Production and Repair.

Pragraph	Subject	NJZ-2000 Support
5	Transmitter Characteristics	
5.2	Maximum Output Power	OK
5.3	Frequency Error	OK
5.4.1	Open Loop Power Control in the Uplink	OK (JRC original method)
5.4.2	Inner Loop Power Control in the Uplink	OK (JRC original method)
5.4.3	Minimum Output Power	OK
5.4.4	Out-of-synchronisation handling of output power	None
5.5	Transmit ON/OFF Power	None
5.6	Change of TFC	OK
5.7	Power setting in uplink compressed mode	None
5.8	Occupied Bandwidth(OBW)	OK
5.9	Spectrum emission mask	Planned
5.10	Adjacent Channel Leakage Power Ratio(ACLR)	OK (JRC original method)
5.11	Spurious Emissions	Planned
5.12	Transmit Intermodulation	None
5.13.1	Error Vector Magnitude(EVM)	OK
5.13.2	Peak code domain error	None
5.13.3	UE Phase discontinuity	None
5.13.4	PRACH preamble quality	None
6	Receiver Characteristics	-
6.2	Reference Sensitivity Level	OK
6.3	Maximum Input Level	OK
6.4	Adjacent Channel Selectivity(ACS)	None
6.5	Blocking Characteristics	None
6.6	Spurious Response	None
6.7	Intermoduration Characteristics	None
6.8	Spurious Emissions	None

Note: Not including the tests for HSDPA.

JRC 建议: 降低测试仪成本至1/3

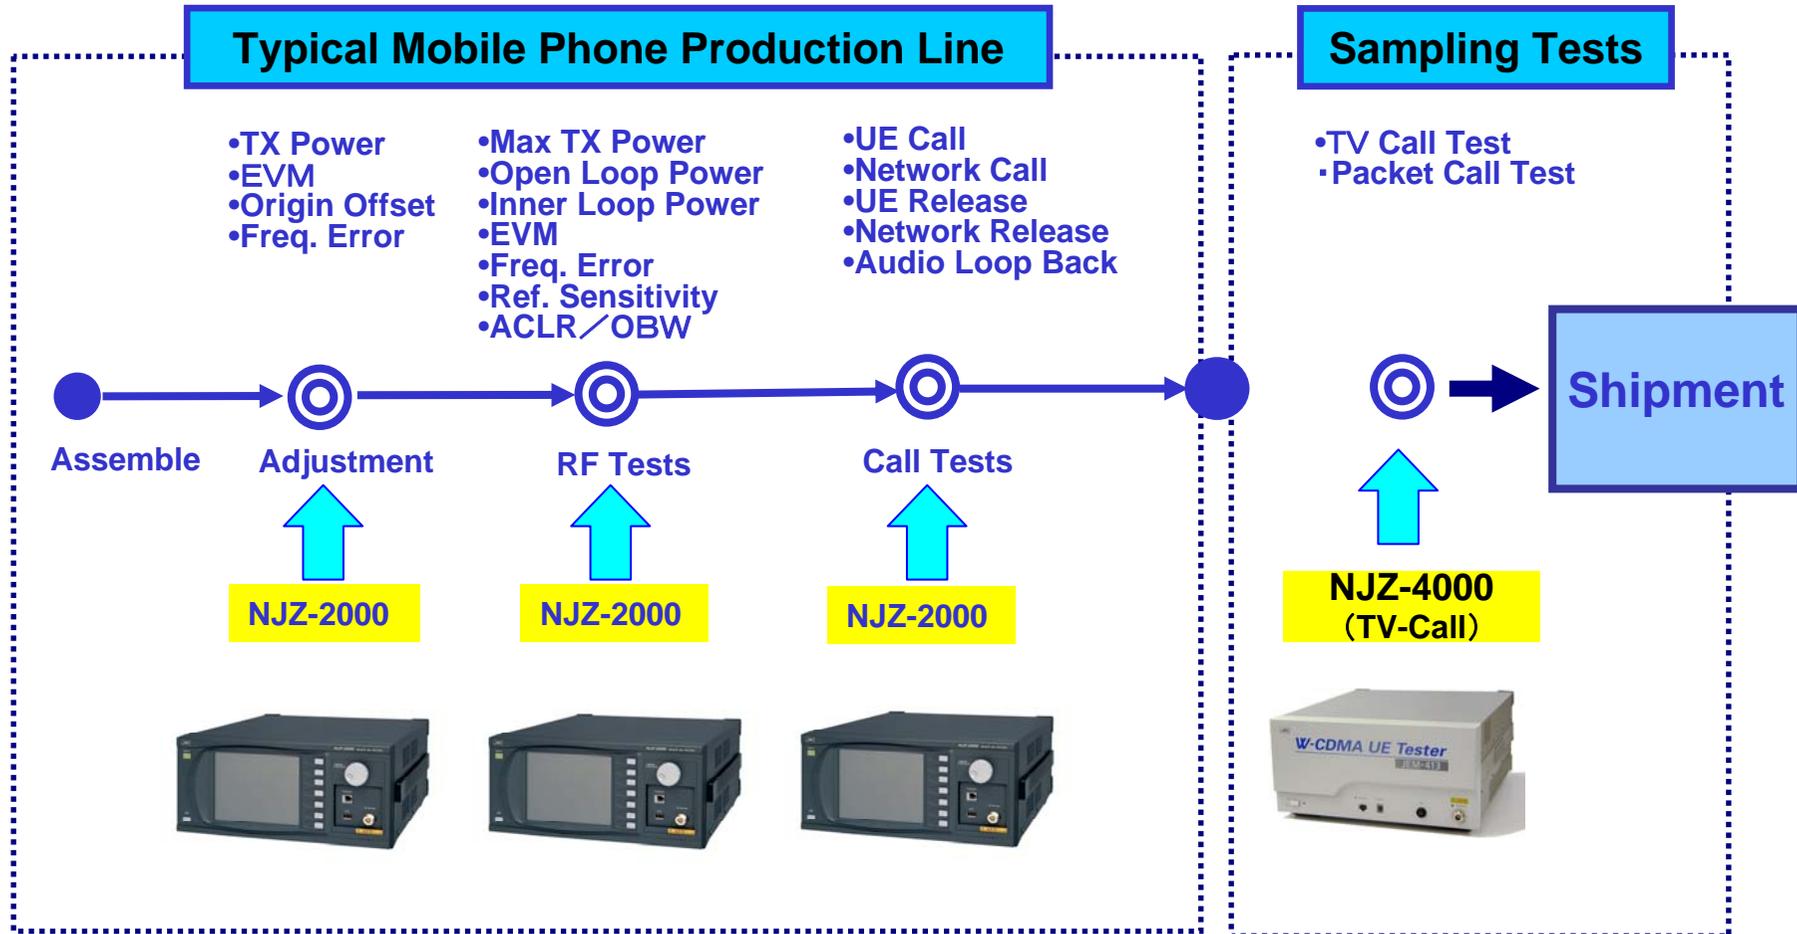

by replacing a high end test with a low cost tester of 1/3 price.

By using NJZ-2000
Price: Low End
Performance: High End

简单快速的 无线制式切换

Improves your Operational Efficiency.

You can switch quickly radio system without re-booting.

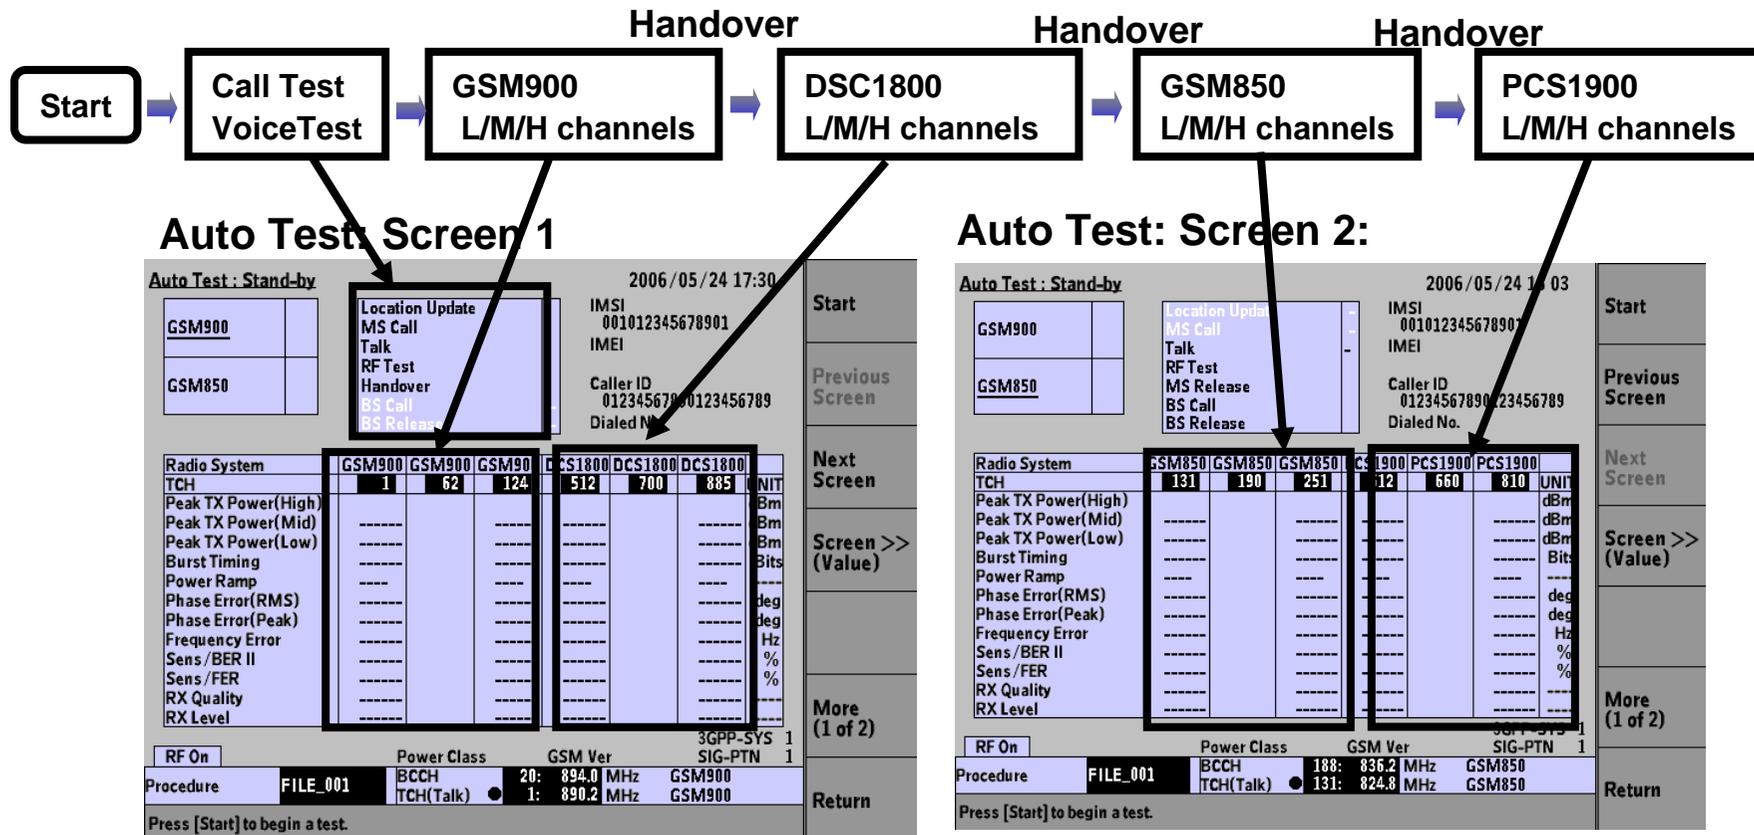

Built-in Full Automatic Test (1/2)

Example: Quad Band GSM phone (12 channels test)

Improves your Operational Efficiency.

- You can perform fully automatic test for a quad band mobile phone at Low/Mid/High channels of GSM900/ DCS1800/GSM850/PCS1900.

Built-in Full Automatic Test (2/2)

- Easy to configure the automatic test script by using Test Sequence screens.

Example:

Select Sequence No.

Specify the desired call tests To be performed.

Specify the desired RF channels and the measurements to be performed.

电缆损耗补偿功能

Easy to calibrate the external RF path loss.

This is available for GSM, W-CDMA, and cdma2000 1x, but not for GPRS, EGPRS, HSDPA, and EVDO.

Procedure:

1. Prepare the mobile handset having the verified RF performance.
2. Establish the call connection between the NJZ-2000 and the handset of the step 1.
3. Press {Loss Cal} softkey. (You can see the {Loss Cal} softkey by pressing {More} some times.)

Measurement Before Loss Cal

Manual Test (GSM) - Measuring 2009/11/11 11:24

+23.4 dBm (Peak TX Power - Fail)

Rx Level 52:-59 to -58 dBm

Condition
 PWR CNTL 5:+33dBm
 BS Level -50dBm

Loss On/Off: Loss Cal

Measurement After Loss Cal

Manual Test (GSM) - Measuring 2009/11/11 11:25

+33.0 dBm (Peak TX Power - Pass)

Rx Level 60:-51 to -50 dBm

Condition
 Same as those before loss cal.

Loss On/Off: Release

Configuration : Test Condition (Loss)

Loss On GSM

	RF In	RF Out
GSM850	0.0 dB	0.0 dB
GSM900	0.0 dB	0.0 dB
DCS1800	0.0 dB	0.0 dB
PCS1900	0.0 dB	0.0 dB

By pressing {Loss Cal} softkey, a measurement is automatically performed, then the loss data are automatically calculated and set at Test Condition (Loss) screen.

Configuration : Test Condition (Loss)

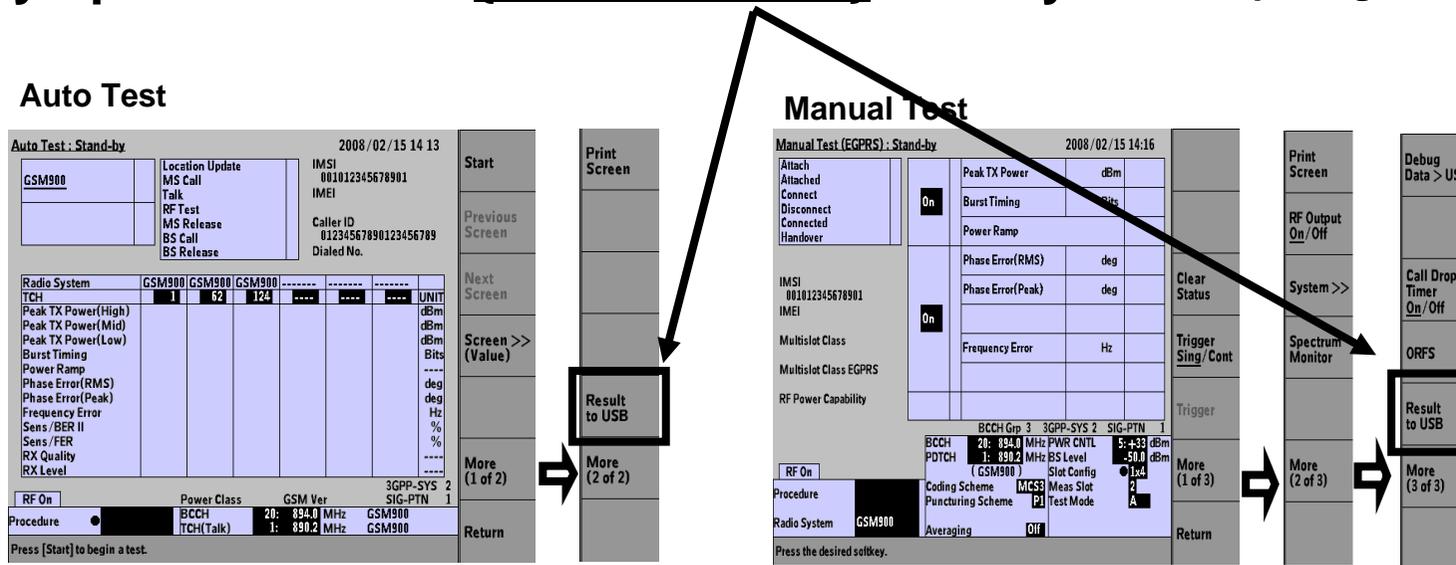

Loss On GSM

	RF In	RF Out
GSM850	9.6 dB	8.5 dB
GSM900	9.6 dB	8.5 dB
DCS1800	0.0 dB	0.0 dB
PCS1900	0.0 dB	0.0 dB

其他: 保存测试结果

Test results can be stored into USB memory device.

Easy operation. Push **{Result to USB}** softkey after completing a test.

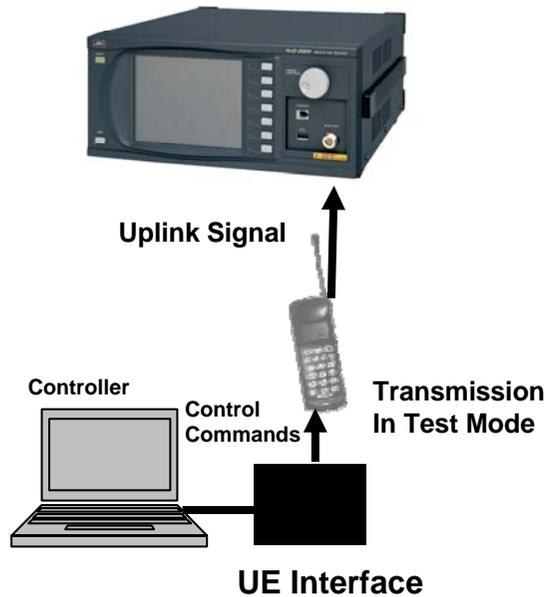

- File name: measyyyymmdd_hhMMx.csv (automatically assigned)
yyyy: year, mm: month, dd: day, hh: hour, MM: minute, x: a to z
- Format: CSV format
- Contents: tester ID, procedure name, date/time, test condition, test limits, test results, and so on

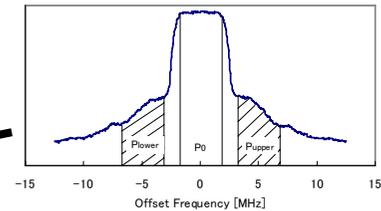

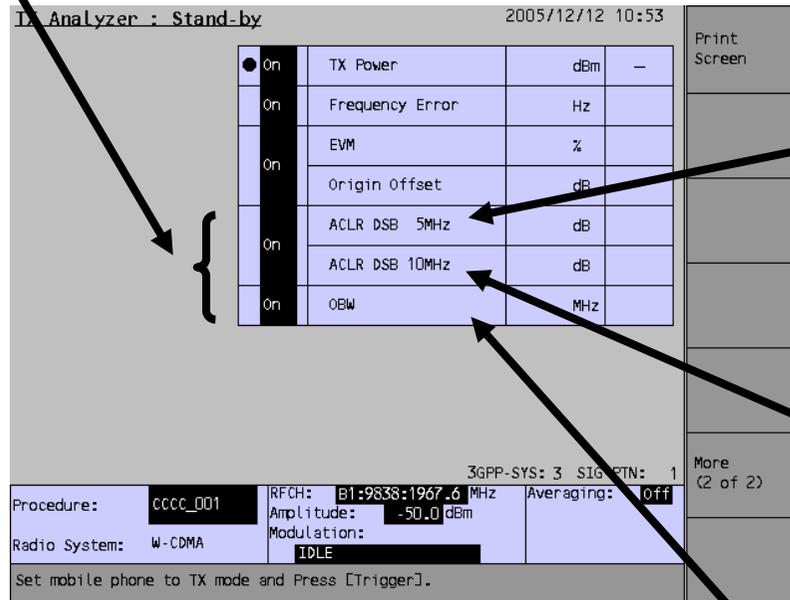

W-CDMA: ACLR/OBW in TX Analyzer (Opt)

Support a fast ACLR/OBW Measurement without call connection.

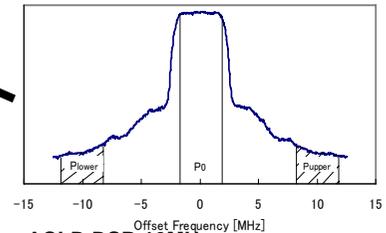

Typical Connection

Press {TX Analyzer} menu.
The you can access to the screen shown below.

ACLR DSB 5MHz =
Plower at -5MHz offset +
Pupper at +5MHz offset

ACLR DSB 10MHz =
Plower at -10MHz offset +
Pupper at +10MHz offset

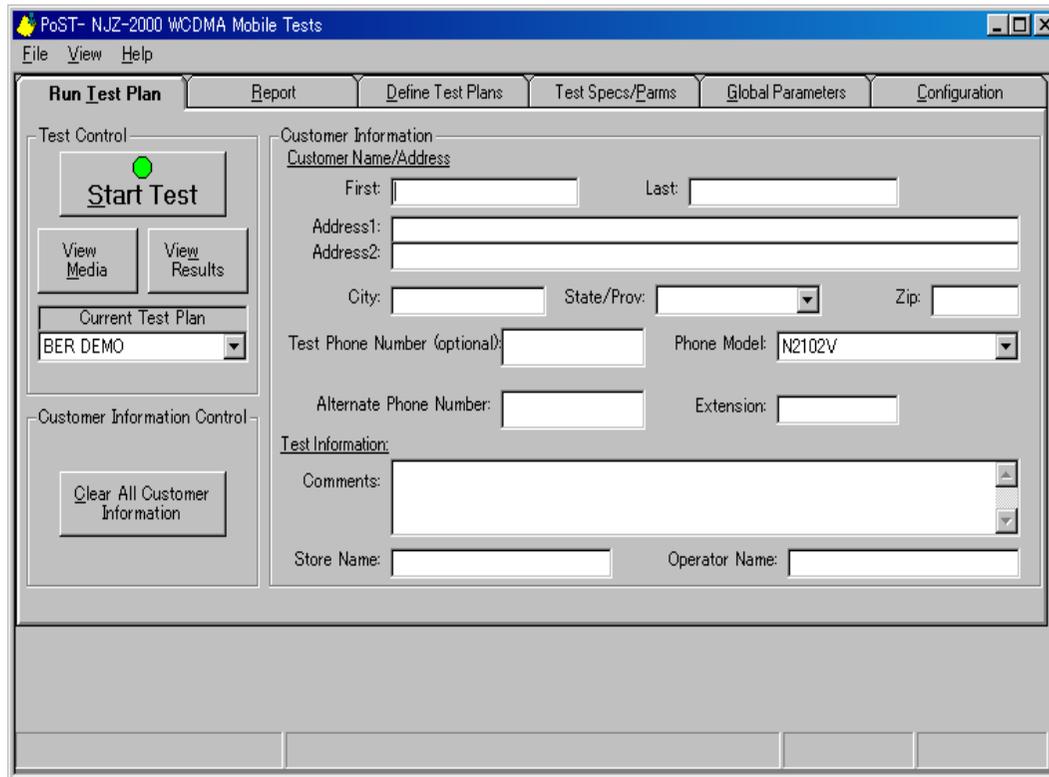

OBW (Occupied BandWidth =
The bandwidth of 99% power of the +/-
5MHz channel power.

A controller is connected to the UE under test through the UE interface. The controller is used to put the UE into a manufacturer unique Test Mode where the UE transmits the uplink power without call connection.

The NJZ-2000 measures the ACLR and OBW of the uplink signal from the UE under test.
